- Read the article below and summarize it in your own words as far as possible in English.
- Suggested length: 90-110 words
- Write your summary in the space provided on your answer sheet. Any writing outside the space will not be graded.

Global warming is one of the most pressing issues facing our planet today. It refers to the long-term rise in Earth's average surface temperature due to human activities, primarily the emission of greenhouse gases like carbon dioxide and methane. Since the Industrial Revolution, these emissions have increased significantly, leading to a steady rise in global temperatures. The consequences of global warming are far-reaching, affecting ecosystems, weather patterns, sea levels, and even human health. Scientists warn that if global warming is not curbed, the planet will face severe and irreversible impacts.

The issue of global warming manifests in several alarming ways. One of the most significant is the melting of polar ice caps and glaciers, which contributes to rising sea levels. This poses a threat to coastal communities worldwide, as higher sea levels lead to more frequent and severe flooding. Additionally, global warming is linked to extreme weather events, such as hurricanes, droughts, and heatwaves, which can cause widespread devastation. For example, the intensity and frequency of hurricanes in the Atlantic have increased, causing billions of dollars in damage and displacing thousands of people. Moreover, rising temperatures disrupt ecosystems, leading to the loss of biodiversity as species struggle to adapt to changing conditions.

Combating global warming necessitates a thorough and diversified strategy. Governments, businesses, and individuals all have roles to play in reducing greenhouse gas emissions. On a governmental level, implementing policies that promote renewable energy sources, such as wind and solar power, is crucial. Countries should also commit to international agreements, like the Paris Agreement, which aims to limit global temperature rise to well below 2 degrees Celsius. Businesses can contribute by adopting sustainable practices, reducing waste, and investing in green technologies. Individuals can make a difference by conserving energy, using public transportation, and supporting eco-friendly products and companies. By working together, we can mitigate the effects of global warming and protect our planet for future generations.
